TWO HUNDRED AND FIFTY STUART STREET

BOSTON

PRINTED IN U.S.A.

Another Stack product embodying the high standards of quality and good engineering maintained since 1894.

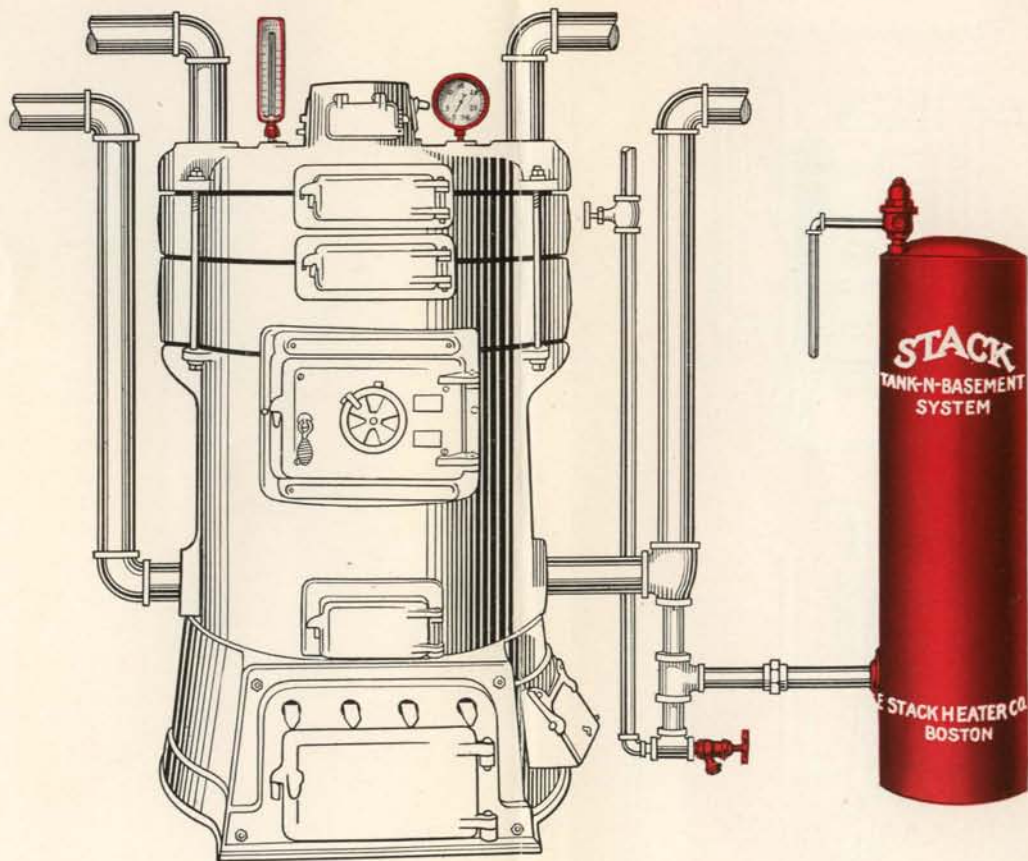

The simplest and safest method of insuring proper circulation on hot water house-heating systems.

Provides an air cushion to absorb expansion, thus protecting the system from damage due to excessive pressure.

Consists of (1) air-tight TANK; (2) RELIEF VALVE constructed according to A.S.M.E. Std. and approved by the Underwriters' Laboratories; (3) THERMOMETER; (4) GAUGE constructed according to A.S.M.E. Std.; (5) DRAIN COCK.

Entire TANK-N-BASEMENT System shipped complete in one package.
